

I am an Electrical Engineer. I have been designing healthcare facilities for more than 40 years, primarily in the United States. I have been able to build my firm, Mazzetti, from a 10-person electrical company to a company of more than 250, with offices across the US, in India, and in Africa. I have also founded and led the Sextant Foundation, an NGO that does development and consulting work to health facilities in low and middle income countries. I have served as an Executive Committee member of IFHE for approximately ten years. I have been serving as Acting President since the unfortunate resignation of Kevin Poggenpoel at the end of 2025. I have degrees in Electrical Engineering, Philosophy, Business, Law, and Energy Law. I have the experience, the expertise, and the energy to help IFHE in this critical time.

This year, I am working very hard to implement significant improvements to the work of IFHE. We are working on a new Workplan, and I spend every available hour on this. I am highly focused on recruiting new members and to pursue potential sponsors, to help fund the organization and over time, reduce the dues burden on our members. I am working hard to build our education program, our awards program, our strategic relationships, our communications, and our website. I am trying to support the various regions to develop. This year, before this term ends, I have already been part of four national congresses around the world, and I am planning a trip to all of our Asian members in the late fall.

I am doing everything I can to help the IFHE, the A,B,C,D, and E members of IFHE, all the individual members of the national organizations, and all of the patients and families we serve around the world.
